PROFILE

Business Intelligence Analyst with 7+ years' experience designing and building Power BI dashboards, data models, and SQL-driven reporting solutions for senior stakeholders across financial services, insurance, and other regulated sectors. Skilled at translating complex, multi-source data into actionable insight, automating ETL and reconciliation pipelines, and delivering enterprise reporting used across 4 global regions (EMEA, Asia, Americas, Africa). Experienced working within governed, regulated data environments, with additional strength in data governance and master data management supporting reporting accuracy.

TECHNICAL SKILLS

BI & Reporting: Power BI (data modeling, DAX, dashboard development), Data Visualization, KPI & Metrics Reporting, Data Dictionary/Catalogue Design, Report Automation & Distribution

Data & SQL: SQL (Joins, CTEs, Window Functions), ETL Design, Data Modeling, Excel (Pivot Tables, Power Query, VBA, VLOOKUP/XLOOKUP), Python/R (incl. LLM-based text classification, PDF parsing)

Platform & Automation: Power Automate, Power Apps, Dataverse, Microsoft 365, Dynamics 365 CE/Field Service, Cloud Data Platforms (Azure Synapse, Snowflake, Databricks)

Delivery: Requirements Gathering, Stakeholder Management, Iterative Dashboard Development, UAT, Data Governance & MDM (Collibra, OneTrust)

CERTIFICATIONS

- Microsoft Power BI Data Analyst Associate (PL-300) — Expected 08/2026

PROJECTS

Regulation Inspector — Personal Project (Python, React, LLM Classification)

Built a tool that parses regulatory PDFs (starting with DORA) while preserving article/paragraph structure, classifies each clause by domain and mandatory/discretionary status using LLM-based tagging, and tracks human-reviewed coverage and remediation across three dashboard views. FastAPI + SQLite backend.

AI Risk Assessment Workflow — Concept Design (Power Apps, Power Automate, Dataverse, Power BI)

Designed an end-to-end AI governance workflow: standardised intake via Power Apps, automated risk scoring and approval routing via Power Automate, Dataverse as the system of record, and Power BI dashboards for risk distribution, cycle times, and model inventory.

Team Resource Allocation Tool — Concept Design (Power Platform, Microsoft Entra ID, Dataverse)

Designed a capacity-planning tool that syncs team rosters from Microsoft Entra ID, models fractional FTE allocations against initiatives in Dataverse, and scales from manual entry to a JIRA Cloud-integrated enterprise system.

KEY ACHIEVEMENTS

- Delivered end-to-end enterprise Power BI dashboards used by senior leadership across 4 global regions (EMEA, Asia, Americas, Africa), cutting manual reporting time by 25% and improving decision turnaround from 5 days to 4 days.
- Migrated reconciliation logic for a customer database from VBA to SQL after legacy system decommissioning, improving processing time from ~1 minute to ~45 seconds per run.
- Enhanced MDM SQL pipelines using Levenshtein-based fuzzy matching in Databricks SQL, reducing unique/duplicate customer values from ~7,000 to ~2,500.
- Led a cross-functional working group of 8 senior stakeholders to digitize the DSAR process, cutting acknowledgment time from days (postal) to hours (phone) and enabling online submission/tracking.
- Designed and implemented workflow optimizations in OneTrust and Collibra, strengthening audit-readiness across 4 regulatory processes.

- Developed a Power BI Data Dictionary dashboard giving 5 senior stakeholders self-service access to view/submit/govern business terminology, halving terminology-related queries.
- Led requirements-gathering sessions with stakeholders through multiple iterative review cycles to deliver KPI visualizations aligned to evolving needs.
- Designed dimensional data models (star schema: 3 fact tables, 5 dimension tables) and authored DAX measures (aggregations, iterators, CALCULATE, time intelligence, DIVIDE ratios), achieving ~20 second report load times.
- Integrated Power Automate workflows into business term submission/approval, enabling Outlook/Teams approvals and reducing turnaround from 10 days to 5 days.

PROFESSIONAL EXPERIENCE

Senior Consultant (Business Intelligence)

05/2019 – Present

Management Solutions, London

Delivers Power BI and data governance projects for senior stakeholders across financial services, insurance, and other regulated sectors, leading small delivery teams of 1–4 analysts.

1st Line Managed Service Technician (Undergraduate Placement)

07/2017 – 07/2018

Exponentiale, London

Frontline Microsoft 365 support for ~25 client organizations, 40-50 tickets/week within SLA, NPS 80%+.

EDUCATION

BEng, Computer Systems Engineering — Upper Second-Class Honours (2:1)

09/2014 – 05/2019

City St George's, University of London (incl. industrial placement)
