PROFILE

Senior Business Analyst with 7+ years' experience spanning Business Intelligence, Technical Business Analysis, Data Governance, and AI Enablement across financial services, insurance, and energy. Builds data governance frameworks and lineage baselines (Collibra, OneTrust), delivers executive-ready Power BI reporting, and independently designed and built an agentic AI system with responsible AI guardrails built in from the outset. Combines structured, quantitative problem-solving with strong stakeholder facilitation, translating ambiguous business and regulatory challenges into clear requirements, governed AI-enabled solutions, and measurable outcomes.

TECHNICAL SKILLS

Data Governance & MDM: Collibra, OneTrust, Data Lineage, Data Cataloguing, Golden-Record Design, Data Stewardship, Dimensional Modelling (Fact & Dimension Tables)

AI & Generative AI: Claude, Gemini, Microsoft Copilot, Generative AI, Agentic AI, Prompt Engineering, Responsible AI Guardrails, AI Output Validation

Business & Technical Analysis: Requirements Elicitation, Business Process Mapping, Data Flow Mapping, Technical Specifications, User Stories, UAT Coordination

Data & Analytics: SQL, Python, Databricks, Power BI (DAX, data modeling), Data Profiling & Quality, Predictive Modelling (Scikit-Learn)

Delivery & Automation: Agile Delivery, Power Automate, Power Apps, Jira, Confluence, SharePoint, Stakeholder Management

Regulatory & Compliance: GDPR, DORA, IFRS 9, EU AI Act, Regulatory Risk Assessment, Third-Party Risk

CERTIFICATIONS

- AWS Certified Cloud Practitioner (CLF-C02)
- AWS Certified AI Practitioner (AWS AI Practitioner) — in progress, scheduled September 2026
- OpenAI Foundational Knowledge
- Google AI Essentials; Google Prompting Essentials
- Databricks Academy Accreditation - Databricks Fundamentals; Databricks Knowledge Badges - SQL Analytics on Databricks, AI/BI for Data Analysts
- Microsoft Power BI Data Analyst Associate (PL-300) — in progress

PROFESSIONAL EXPERIENCE

Senior Consultant

Management Solutions, London July 2019 – Present

Works as an external consultant across business analysis, data governance, business intelligence, and AI enablement engagements for senior stakeholders across financial services, insurance, and energy, leading small delivery teams of 1-4 analysts.

Data Governance & Master Data Management

- Built Collibra-based data flow maps for a multinational energy institution from scratch, establishing a lineage baseline and tracing data from source to consumption to surface data-quality and retention risk.
- Analysed and modelled Broker Data into a unified master dataset for a Global Insurance Firm, establishing data-ownership and stewardship requirements for an authoritative golden-record view using dimensional (fact and dimension table) modelling.

AI Enablement & Governance

- Designed and built an AI risk-assessment workflow within OneTrust, translating a business need into a technical, AI-supported solution with governance controls, assessment forms, and safe-adoption standards built in from the outset.

Regulatory & Risk Assessment

- Assessed a global systemically important bank's processes against DORA requirements, evaluating control design and third-party risk, and producing findings that informed remediation priorities for senior stakeholders.
- Performed large-scale validation and reconciliation of IFRS 9 datasets across mortgage-loan portfolios ahead of regulatory submission, identifying data anomalies and lineage gaps.

Business Intelligence & Reporting

- Delivered end-to-end Power BI dashboards used by senior leadership across 4 global regions, cutting manual reporting time by 25% and improving decision turnaround from 5 to 4 days.
- Built a Power BI Data Dictionary dashboard with a Microsoft Forms-driven submission flow feeding a SharePoint list, automated end to end with Power Automate, giving 5 senior stakeholders self-service access and halving terminology-related queries.

Predictive Modelling & Data Quality

- Built a statistical model in Python and Scikit-Learn to assess bank branch viability against variables including local amenities, retail footfall, and parking availability, informing a live branch-retention decision.
- Applied Levenshtein-based fuzzy matching in Databricks SQL, reducing duplicate customer records from ~7,000 to ~2,500 through systematic data profiling and validation.

Stakeholder Leadership & Change

- Led a working group of 8 senior stakeholders across legal, technology, and business functions through digitising a manual DSAR process end to end, from discovery through UAT and live rollout, cutting turnaround time from days to hours.
- Migrated reconciliation logic from a legacy VBA system to SQL following system decommissioning, and integrated Power Automate workflows into a business term submission/approval process, cutting turnaround from 10 days to 5.

1st Line Managed Service Technician (Undergraduate Placement)

Exponentiale, London

July 2017 – July 2018

Frontline Microsoft 365 support for ~25 client organizations, resolving 40-50 tickets/week within SLA while maintaining an 80%+ Net Promoter Score.

PERSONAL PROJECT: GENAI REGULATORY RISK CLASSIFIER (AGENTIC AI)

Independently designed and built an agentic AI system in Python using Claude, Gemini, and Copilot, that scores new organisational initiatives for regulatory risk, grounding its output against EU AI Act reference material rather than unguarded generation. Built in human-in-the-loop validation and responsible AI guardrails to catch degraded or incorrect output, and deliberately scoped delivery to one domain before expanding, direct, self-directed evidence of designing, building, and governing an AI-powered application end to end.

EDUCATION

BEng (Hons), Computer Systems Engineering — Upper Second-Class Honours (2:1)

City St George's, University of London (incl. industrial placement) September 2014 – May 2019
